**TO WHOM IT MAY CONCERN**

While undergoing the independent third-party audit of its 2024 emissions reductions, the Government of Guyana has become aware of a calculation adjustment that that is needed in the tallying of emissions reductions for 2023. This would lead to a revised number of credits issuance of TREES credits for 2023.

In line with Government policy and the published ART processes, this is being reviewed. An addendum to the 2023 TREES Monitoring Report is being developed and verified as part of our current 2024 verification process, expected to be completed later this year. As required by ART, we will ensure an adjustment is made for any differences in crediting level that may have occurred, once the correct 2023 volume is verified.

In the meantime, and recognizing that no transacted volume is affected, as a mitigating measure, the Government of Guyana has transferred a conservative volume of 2023 TREES Credits that have not yet been transacted to the ART Registry Administrator account. These credits will be used by ART for any required adjustment, with the remainder being transferred back to the Government of Guyana.
